Cotton & Company LLP is under contract with the National Oceanic and Atmospheric Administration (NOAA) to develop an indirect cost rate for recovering Office of General Counsel for Natural Resources (GCNR) indirect costs incurred for restoration of injured natural resources.

The purpose of this report is to provide GCNR with the results of Cotton & Company's review of Fiscal Year (FY) 2004 costs and development of an indirect cost rate. This document presents GCNR's FY 2004 indirect cost rate and explains the methodology we used. This rate will be used to determine indirect damage assessment and restoration costs allocable to specific cases for cost-recovery purposes.

BACKGROUND

NOAA has statutory authority to protect and restore the nation's coastal and marine resources. This authority includes the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA); Oil Pollution Act of 1990; Federal Water Pollution Control Act; and National Marine Sanctuaries Act. These laws provide for recovery of costs to restore natural resources and their services injured by potentially responsible parties.

To fulfill its responsibility under this legislation as a natural resource trustee, NOAA established the Damage Assessment and Response Program (DARP). DARP's mission is to assess damages and restore injuries to marine and coastal resources resulting from hazardous substance and oil spills as well as ship groundings caused by responsible parties. This mission is accomplished through the conduct of Natural Resource Damage Assessments (NRDA). DARP is comprised of three NOAA component organizations: Damage Assessment Center (DAC) within the National Ocean Service; GCNR; and Restoration Center (RC) within the National Marine Fisheries Service.

FINANCIAL MANAGEMENT SYSTEM

GCNR costs reside in the NOAA financial management system, CAMS (Commerce Administrative Management System). CAMS identifies costs by financial management centers (FMC), task codes, and object classification codes. FMCs are groups of organizations that control funding activities. GCNR's FY 2004 costs were accumulated under FMC 102 (Office of General Counsel).

DARP organizations assign each NRDA case, as well as other projects and activities, with one or more unique task codes. GCNR tracks both labor and nonlabor costs by task code. Object classification codes identify the type of cost (such as salaries, travel, and contracts).

GCNR uses task codes to accumulate its indirect costs associated with DARP. These are costs for general and administrative activities that support, sustain, or enhance the DARP mission. Examples of such activities include:

- Employee recruiting and training.
- General budget formulation, monitoring, analysis, and reporting.
- Non-case-specific management and staff meetings on administrative matters.
- General cost accounting, computer support, and secretarial support.
- General records management and database support.

- General program policy and development.
- Spill response readiness.
- Techniques and methods development.

NOAA applies internal burden (overhead) rates to labor costs on CAMS to recover agency overhead from each FMC for leave, benefits, and management and support costs. Application and descriptions of NOAA overhead rates follow:

- **Leave Surcharge** is applied to labor costs and includes costs for administrative, annual, and sick leave.
- **Personnel Benefits** is applied to labor and leave costs. This includes payroll taxes, civil service retirement, health benefits, life insurance, regular employer retirement contributions, Federal Insurance Contributions Act payments, and Federal Retirement Service thrift savings plan basic and matching contributions.
- **NOAA Administrative Support** is applied to labor and leave costs. It includes costs incurred by NOAA's executive, line, and other supporting offices. These costs are associated with administrative functions such as personnel, training, procurement, telecommunications, operations, storage, mail, housekeeping, and other common services.

INDIRECT COST ALLOCATION METHODOLOGY

We developed the indirect cost rate methodology using generally accepted accounting principles, Cost Accounting Standards, and Statement of Federal Financial Accounting Standards (SFFAS) No. 4, Managerial Cost Accounting Concepts and Standards for the Federal Government. The following principles are inherent in this allocation method:

- The costing methodology for identifying and allocating costs as direct or indirect is consistently applied.
- The allocation base that best approximates benefits accruing to cost objectives is selected.
- All items properly included in the allocation base are included and receive their share of indirect costs.
- Indirect costs are assigned to cost objectives on a cause-and-effect basis or by allocating on a reasonable and consistent basis.

To develop the indirect cost rate, we:

- Obtained an understanding of GCNR procedures for documenting DARP costs, including its financial management system and business practices.
- Obtained downloads of FY 2004 GCNR cost transactions and performed tests to verify the completeness and accuracy of these downloads.
- Identified costs incurred on DARP tasks with the assistance of GCNR personnel.
- Identified DARP task codes as either direct or indirect and accumulated related costs in these categories.

In addition, we adjusted costs as necessary to ensure the accuracy and completeness of the indirect cost pool and base. Adjustments to GCNR costs are described below:

- Labor cost downloads did not include NOAA internal burden charges. We applied applicable NOAA leave and benefit rates to both direct and indirect labor costs. We applied NOAA support and General Services Administration (GSA) rent rates to indirect labor for inclusion in the indirect cost pool.
- We excluded from the indirect cost pool all GCNR tasks that did not benefit the DARP program, or for which the benefit to the DARP program could not be measured (including costs incurred for National Marine Sanctuaries Program policy development). To the extent that management and support costs were allocable to these tasks, we excluded those costs from the indirect cost pool.

SFFAS No. 4, Paragraph 124, states that costs should be allocated using one of the following three methods:

1. Directly tracing costs (wherever economically feasible).
2. Assigning costs on a cause-and-effect basis.
3. Allocating costs on a reasonable and consistent basis.

It is not practical or feasible to directly assign DARP indirect costs to final cost objectives. We consider direct labor costs an appropriate base for allocating DARP indirect costs to benefiting activities. We calculated the FY 2004 indirect cost rate with direct labor costs as a base.

We performed our work in accordance with *Statements on Standards for Consulting Services* promulgated by the American Institute of Certified Public Accountants. We did not review or evaluate NOAA's internal burden rates. Because the indirect cost allocation methodology used to develop the indirect cost rate does not constitute an examination made in accordance with generally accepted auditing standards, we do not express an opinion on GCNR's financial statements. This report relates only to the accounts and items specified in the attached exhibit and schedules and does not extend to any financial statement of NOAA.

The information contained in this report is intended solely for the purposes described in the first section of this report and should not be used for any other purpose.
