**NATIONAL OCEANIC AND ATMOSPHERIC ADMINISTRATION
DAMAGE ASSESSMENT, REMEDIATION, AND RESTORATION PROGRAM**

**OFFICE OF RESPONSE AND RESTORATION
FISCAL YEAR 2010 INDIRECT COST RATE**

Cotton & Company LLP is under contract with the National Oceanic and Atmospheric Administration (NOAA) to develop an indirect cost rate for recovering Office of Response and Restoration (OR&R) indirect costs incurred on damage assessment, remediation, and restoration of injured natural resources.

The purpose of this report is to provide OR&R with the results of Cotton & Company's review of Fiscal Year (FY) 2010 costs and development of an indirect cost rate. This document presents OR&R's FY 2010 indirect cost rate and explains the methodology we used. The rate is presented in the exhibit followed by supporting schedules detailing costs by task and by object class. This rate will be used to determine indirect damage assessment costs allocable to specific cases for cost-recovery purposes.

BACKGROUND

NOAA has statutory authority to protect and restore the nation's coastal and marine resources. This authority includes the Comprehensive Environmental Response, Compensation, and Liability Act; Oil Pollution Act of 1990; Federal Water Pollution Control Act; and National Marine Sanctuaries Act. These laws provide for recovery of costs to restore natural resources and their services injured by potentially responsible parties.

To fulfill its responsibility under this legislation as a natural resource trustee, NOAA established the Damage Assessment, Remediation, and Restoration Program (DARRP). DARRP's mission is to assess damages and restore injuries to marine and coastal resources resulting from hazardous substance releases and oil spills as well as ship groundings caused by responsible parties. This mission is accomplished through the conduct of Natural Resource Damage Assessments (NRDA). DARRP is comprised of three NOAA component organizations: OR&R within the National Ocean Service; Office of General Counsel for Natural Resources (GCNR); and Restoration Center (RC) within the National Marine Fisheries Service.

OR&R has three divisions: the Emergency Response Division (ERD), Marine Debris Program (MDP), and Assessment and Restoration Division (ARD). ERD facilitates spill prevention, preparedness, response, and restoration and supports oil and chemical spill responses in U.S. coastal waters. MDP's focus is on identifying, reducing, and preventing debris in the marine environment. ARD protects and restores coastal natural resources injured by hazardous substances. ARD performed DARRP work in FY 2010.

FINANCIAL MANAGEMENT SYSTEM

OR&R costs reside in the NOAA financial management system, Commerce Business Systems (CBS). CBS identifies costs by financial management centers (FMC), task codes, and object classification codes. FMCs are groups of organizations that control funding activities. OR&R's FY 2010 costs were accumulated under FMC 1012. DARRP organizations assign each NRDA case, as well as other projects and activities, with one or more unique task codes. OR&R tracks both labor and non-labor costs by task code. Object classification codes identify the cost type (such as salaries, travel, and contracts).

OR&R uses task codes to accumulate its indirect costs associated with DARRP. These are costs for general and administrative activities that support, sustain, or enhance the DARRP mission. Examples of such activities include:

- Employee recruiting and training.
- General budget formulation, monitoring, analysis, and reporting.
- Non-case-specific management and staff meetings on administrative matters.
- General cost accounting, computer support, and secretarial support.
- General records management and database support.
- General program policy and development.
- Techniques and methods development.

NOAA applies internal burden (overhead) rates to labor costs in CBS to recover agency overhead from each FMC for leave, benefits, and management and support costs. NOAA's overhead rate components and bases of application follow:

- **Leave Surcharge** is applied to labor costs and includes costs for administrative, annual, and sick leave.
- **Personnel Benefits** is applied to labor and leave costs. This includes payroll taxes, civil service retirement, health benefits, life insurance, regular employer retirement contributions, Federal Insurance Contributions Act payments, and Federal Retirement Service thrift savings plan basic and matching contributions.
- **NOAA Administrative Support** is applied to labor and leave costs. It includes costs incurred by NOAA's executive, line, and other supporting offices. These costs are associated with administrative functions such as personnel, training, procurement, telecommunications, operations, storage, mail, housekeeping, and other common services.

INDIRECT COST ALLOCATION METHODOLOGY

We developed the indirect cost rate methodology using generally accepted accounting principles, Cost Accounting Standards, and Statement of Federal Financial Accounting Standards (SFFAS) No. 4, Managerial Cost Accounting Concepts and Standards for the Federal Government. The following principles are inherent in this allocation method:

- The costing methodology for identifying and allocating costs as direct or indirect is consistently applied.
- The allocation base that best approximates benefits accruing to cost objectives is selected.
- All items properly included in the allocation base are included and receive their share of indirect costs.
- Indirect costs are assigned to cost objectives on a cause-and-effect basis or by allocating on a reasonable and consistent basis.

To develop the indirect cost rate, we:

- Obtained an understanding of OR&R's FY 2010 organization.
- Obtained an understanding of OR&R procedures for documenting DARRP costs, including its financial management system and business practices.
- Obtained downloads of FY 2010 OR&R cost transactions and performed tests to verify the completeness and accuracy of these downloads.
- Identified costs incurred on DARRP tasks with the assistance of OR&R personnel.
- Identified task codes as direct, indirect, or non-allocable and then accumulated related costs in these categories.

In addition, we adjusted costs as necessary to ensure the accuracy and completeness of the indirect cost pool and base. Adjustments to OR&R costs are described below:

- Labor cost downloads did not include NOAA internal burden charges. We applied applicable NOAA leave and benefit rates to both direct and indirect labor costs. We applied NOAA support and General Services Administration (GSA) rent rates to indirect labor costs. We included those costs allocable to indirect labor in the indirect cost pool.
- I.M. Systems Group, Inc. (IMSG) and Genwest, commercial contractors, performed damage assessment and restoration work that benefited OR&R tasks. IMSG and Genwest personnel work in NOAA offices. We obtained IMSG and Genwest time reports and calculated the cost of all direct time spent on DARRP tasks. We included direct IMSG and Genwest labor costs in the direct labor base.
- We identified OR&R indirect costs that benefit all divisions, such as those incurred by the OR&R Business Services Group (BSG). We pooled these costs and calculated amounts allocable to ERD and MDP. We excluded those costs from the indirect cost pool, because ERD and MDP costs are not included in the indirect cost rate base.
- We excluded from the indirect cost pool all OR&R tasks that did not benefit the DARRP program, or for which the benefit to the DARRP program could not be measured. We also excluded the cost of several indirect activities that benefited only a small number of DARRP cases. To the extent that management and support costs were allocable to these tasks, we excluded those costs from the indirect cost pool.

The resulting indirect cost rate includes only allocable indirect costs for DARRP work performed by ARD in FY 2010 and should be used to recover indirect costs of those activities.

SFFAS No. 4, Paragraph 124, states that costs should be allocated using one of the following three methods:

1. Directly tracing costs (wherever economically feasible).
2. Assigning costs on a cause-and-effect basis.
3. Allocating costs on a reasonable and consistent basis.

It is not practical or feasible to directly assign DARRP indirect costs to final cost objectives. We consider direct labor costs an appropriate base for allocating DARRP indirect costs to benefiting activities. We calculated the FY 2010 indirect cost rate with ARD direct labor costs as a base. We included direct labor costs for IMSG and Genwest in the base, because these costs have the same relationship to the indirect cost pool as NOAA direct labor costs.

We performed our work in accordance with *Statements on Standards for Consulting Services* promulgated by the American Institute of Certified Public Accountants. We did not review or evaluate NOAA's internal burden rates. Because the indirect cost allocation methodology used to develop the indirect cost rate does not constitute an examination made in accordance with generally accepted auditing standards, we do not express an opinion on OR&R's financial statements or its indirect cost rate. This report relates only to the accounts and items specified in the attached exhibit and schedules, and does not extend to any financial statement of NOAA.

The information contained in this report is intended solely for the purposes described in the first section of this report and should not be used for any other purpose.
